Get BACnet MS/TP Slave Data into Your OPC UA Client

The 460BMUS moves data between up to 32 BACnet MS/TP slave devices and an OPC UA client. It's a perfect tool to tie your OPC UA network to your building automation system.

Best of all, the product is made in the USA, always in stock, and comes with 5-year warranty.

### How Do I Use the 460BMUS-NNA4 in My Application?

Incoming and outgoing BACnet MS/TP analog and binary data is mapped to OPC UA nodes. The data moves bidirectionally.

It's really that simple. Need to modify your data as it passes from one protocol to the other? No problem. Each data mapping you apply can be modified with up to three mathematic functions. Need to add or remove delimiters between segments, it does that too.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.
When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
