### Connect an EtherNet/IP Scanner Device to a BACnet MS/TP Master

The 460ESBMS moves data between a BACnet MS/TP master device and an EtherNet/IP client. It's the perfect tool to tie your EtherNet/IP scanner to your BACnet MS/TP building automation system.

Integrate BACnet MS/TP controllers into your EtherNet/IP applications.

## How Do I Use the 460ESBMS-NNA1 in My Application?

Up to 480 bytes of data from your EtherNet/IP scanner will be mapped to BACnet MS/TP. Up to 32 BACnet MS/TP devices can be presented on EtherNet/IP.

Need to modify or scale your data as it passes from one protocol to the other? No problem. Each data mapping you apply can be modified with up to 3 mathematic functions. Add 4 to a value, multiply by 4 and divide by 10 with ease.

## Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.

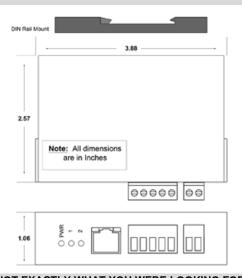

A Solution, A Philosophy, the RTA Way. We understand the long hours spent on a factory floor and the pressure to keep a line running and product flowing. That's how Real Time Automation came to be. You want easy-to-use solutions where the hardest part is to open the box. You need customer support second to none. If you get all that and a fun customer experience all the better. Thirty years later, our mission remains the same: To move your data where you need it, when you need it, and how you need it.
