Get Your BACnet MS/TP System Connected Directly to the Data Table of Your Allen-Bradley PLC

The 460ETCBMS moves data between a BACnet MS/TP system and Allen-Bradley PLCs.

With the 460ETCBMS, you are making a direct connection between BACnet MS/TP master data and user-defined tags or registers in the data table of your Allen-Bradley PLCs. There is no polling from the PLC or EtherNet/IP scan lists to arrange.

### How Do I Use the 460ETCBMS-NNA4 in My Application?

You allocate two blocks in your Allen-Bradley PLC. One area is write only tags or register blocks accepting data from your BACnet MS/TP master. The other area is read only tags or register blocks to send data to your BACnet MS/TP master.

It's really that simple.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
