Manipulate Modbus RTU Slave Data Moving to a Modbus RTU Master

The 460MMMRS moves data between up to 32 Modbus RTU/ASCII slave and a Modbus RTU/ASCII master. This is the perfect tool to connect more than 32 slave devices to a master, add scaling, or move data between Modbus RTU and Modbus ASCII devices.

With the 460MMMRS, register and coil data can freely move between any devices connected to the gateway.

How Do I Use the 460MMMRS-NNA4 in My Application?

The 460MMMRS is designed for those times when you have to manipulate your data, slow down the flow of data, allow a master to handle more slaves than it supports, or move data from Modbus ASCII to Modbus RTU.

It really is that simple.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.

A Solution, A Philosophy, the RTA Way. We understand the long hours spent on a factory floor and the pressure to keep a line running and product flowing. That's how Real Time Automation came to be. You want easy-to-use solutions where the hardest part is to open the box. You need customer support second to none. If you get all that and a fun customer experience all the better. Thirty years later, our mission remains the same: **To move your data where you need it, when you need it, and how you need it.**
